Flying into Pegasus for the **HopeKids** event Saturday October 15 2016

**** Pegasus Frequency 123.0 ****

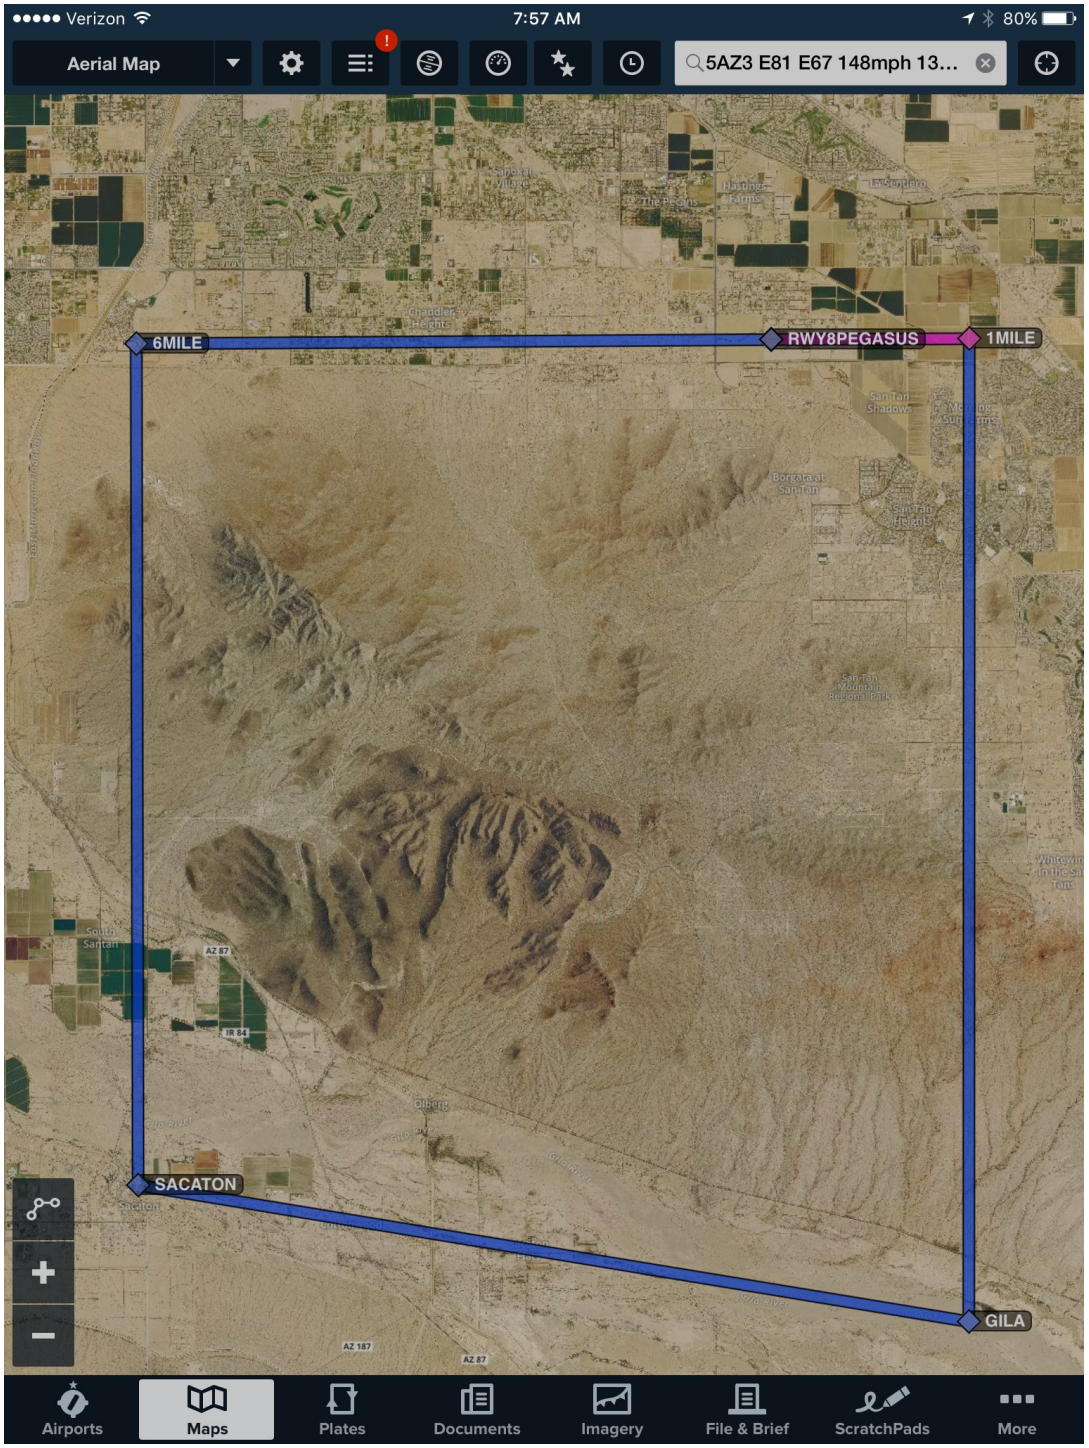

For the EVENT ONLY: fly a right traffic pattern for landing on Runway 08. This is to keep the traffic levels down over the neighbors to the north. Morning winds are typically out of the east at Pegasus. Please be patient and courteous to other pilots.

Note: Gateway Class D Airspace begins approximately 1 mile north of Pegasus

We will have a controller for ground operations but not for air traffic, Aircraft parking will be on the south taxiway.

Our route for flying the HopeKids is to depart to the east at least a mile prior to turning south. We will fly south to the Gila river valley then west to the west side of the SanTan mountains, then turn north and set up for a straight in approach to Pegasus. We will be flying HopeKids through the morning. Please allow priority to those pilots. This is a fundraiser for the HopeKids organization and an opportunity to share the gift of flight with them.

Pegasus HopeKids Flightpath

Please climb to 3000’ to keep our flights from bothering the neighbors.

After takeoff fly at least one mike east before turning south. Fly south east of the Santan Mountains for 6 miles, then turn west and follow the river valley for 6 - 7 miles. Turn north once you have cleared the west side of the Santan Mountains. Proceed north to line up for a straight in approach for runway 8 at Pegasus.

Thank you...
